

Mohammed Tanveer Ahmed

+91-8686611561 — mdtanveer3105@gmail.com — <https://www.linkedin.com/in/mohammed-tanveer-ahmed3105/> — <https://github.com/mdtanveer801>

Summary — I am Mohammed Tanveer Ahmed an aspiring Data Scientist And I am Machine Learning fresher who is trying to seek a role to enhance and explore my technical knowledge in your company.

Career Objective —

I want to be a part of renewed organization And to contribute towards the growth of the organization based on my personal capabilities by learning from the new exposure within the structured frame of work.

Skills

Data Analysis	Pandas, NumPy, Matplotlib, Seaborn, EDA	Cloud	Azure
Machine Learning	Scikit-Learn, XGBoost, LightGBM, TensorFlow, PyTorch	Languages	C, C++, Python
Statistics	Hypothesis Testing, Probability, Bayesian Inference, Regression Analysis	MLOps	MLflow, Kubeflow, TensorFlow Extended
Computer Vision	OpenCV, YOLO, Detectron2, Mediapipe	Generative AI	OpenAI API, Hugging Face, LangChain, LlamaIndex
		Model Deployment	Flask, Streamlit
		Business Intelligence	Power BI, Tableau

Education

JNTUH University

College: NSAKCET, Hyderabad

Bachelor of Technology In Information Technology (6.61 CGPA) Sept 2023

Intermediate

College: Sri Chaitanya College, Hyderabad

MPC 60 percent 2018

SSC

School: Archana High School, Hyderabad

Aggre 6.5 (GPA) 2015

Certifications

- Data Science with Certified Naresh-i-Technology pvt.ltd
- How to become a social Engineer (IEEE Branch)
- Workshop On Power Python (LUDIFU)
- National E -Quiz on "Microprocessor and MicroController (Lords college)
- MS Office (SAR computers SETWIN)
- Webinar In DATA SCIENCE (NSAKCET IEEE)
- Profile building Workshop (CV DRAGON)
- Programming Essentials in C (CISCO Networking Academy)
- National level Online Faculty Development Program (NSAKCET IEEE Branch)
- National Level Student one week workshop on REACT JS (BRAIN OVISION)
- Tutoring Workshop Certificate (MANNU)

Projects

Customer Churn Prediction

Present

- Developed a customer churn prediction model using machine learning techniques to identify at-risk customers and reduce attrition.
- Implemented feature engineering, model selection, and hyperparameter tuning to improve predictive accuracy.
- Deployed the model using Streamlit App and integrated it with a real-time dashboard for actionable insights.

Diabetes-Prediction-Project-with-Streamlit-App

Present

- Developed a machine learning model using Python and Scikit-learn to predict diabetes risk, leveraging patient health metrics like glucose levels, BMI, and age for early diagnosis.
- Designed and deployed an interactive Streamlit web app to showcase real-time predictions, enabling users to input health data and receive risk assessments with an intuitive UI.
- Achieved 85 percent model accuracy through feature engineering and cross-validation, streamlining data preprocessing (missing value handling, normalization) for scalable healthcare insights.

Detecting-a-vehicle-s-number-plate-Using-Pytesseract-OCR-library

Present

- Developed an automatic vehicle number plate detection system using the Pytesseract OCR library in Python.
- Implemented image preprocessing techniques such as thresholding and contour detection for accurate text extraction.

- Enhanced the system's accuracy by integrating noise reduction and image enhancement techniques, ensuring reliable vehicle number plate recognition even in challenging environmental conditions
- Effortless license plate recognition for real-world images, improving automation in vehicle tracking applications.

Language-translator-using-GTTS-and-Streamlit-App

Present

- Developed a Language Translator Web App using Streamlit and GTTS, enabling real-time text translation and speech synthesis.
- Integrated Google Text-to-Speech (GTTS) for converting translated text into natural-sounding speech.
- Built an interactive UI with Streamlit, allowing users to input text, select languages, and listen to translations seamlessly.

Health Monitoring System Using IOT and Machine Learning”

B-Tech Major Project 2022

- Designed and developed a Health Monitoring System integrating IoT sensors and Machine Learning for real-time health data analysis.
- Implemented sensor-based data acquisition using hardware components to monitor vitals like heart rate and temperature.
- Built a predictive analytics model to detect health anomalies, with a software dashboard for real-time visualization and alert.

I hereby affirm that the information provided in this form is true correct to the best of my knowledge.
